June 23, 2005

Dear Mme Rousseau:

We used the DRM Scarfix gel on the face and neck scars of a young patient with second and third degree burns. After the first few days of using the gel, we noticed a change in the colour of the scar and the softness of the skin. The gel is being applied three times a day, as prescribed for treating such scars. A decision was taken to extend the treatment to all remaining scar surfaces and we are continuing the treatment. This is indeed very encouraging for our patients and will surely have a positive impact on their quality of life.

A handwritten signature in blue ink that reads "Diane Richard".
